SPRING HILL, TENNESSEE

Worldwide Stages

A regenerative future for a working campus

Investor discussion
September 2026

A place with room to grow

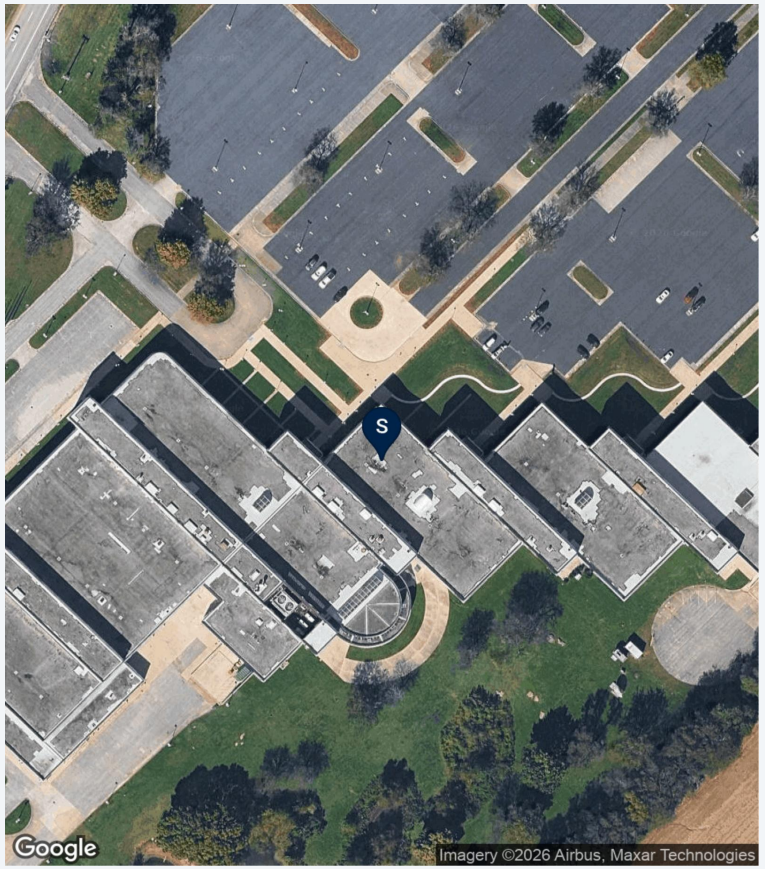

56.6

acres across three parcels

355,990

gross square feet

Production spaces. Offices. Event venues.

Zoning, access and room to grow

IC zoning

Core parcel: data center use by right

4 new stages

Proposed; final approvals unconfirmed

Private access

Gated road · ~1,000 parking spaces

~30 minutes

To downtown Nashville*

+46% population

Within 3 miles, 2020–2026 estimate

203,733 sq ft

Vacant rentable space

*Management estimate. Existing campus; expansion approvals remain separate.

Spring Hill zoning letter, 23 Dec 2024; Planning Commission, Jul 2025; A&M draft, Aug 2026; group discussion, 15 Sep 2026

An acquisition grounded in real estate

PROPOSED PURCHASE PRICE

$32M

SELLER-COMMISSIONED DRAFT APPRAISAL

$46.27M

The appraisal is a starting point for diligence.

Draft, with no physical inspection. Title, environmental and survey assumptions remain to be checked.

Purchase discussion, 15 Sep 2026; A&M draft appraisal, 26 Aug 2026

An income base already in place

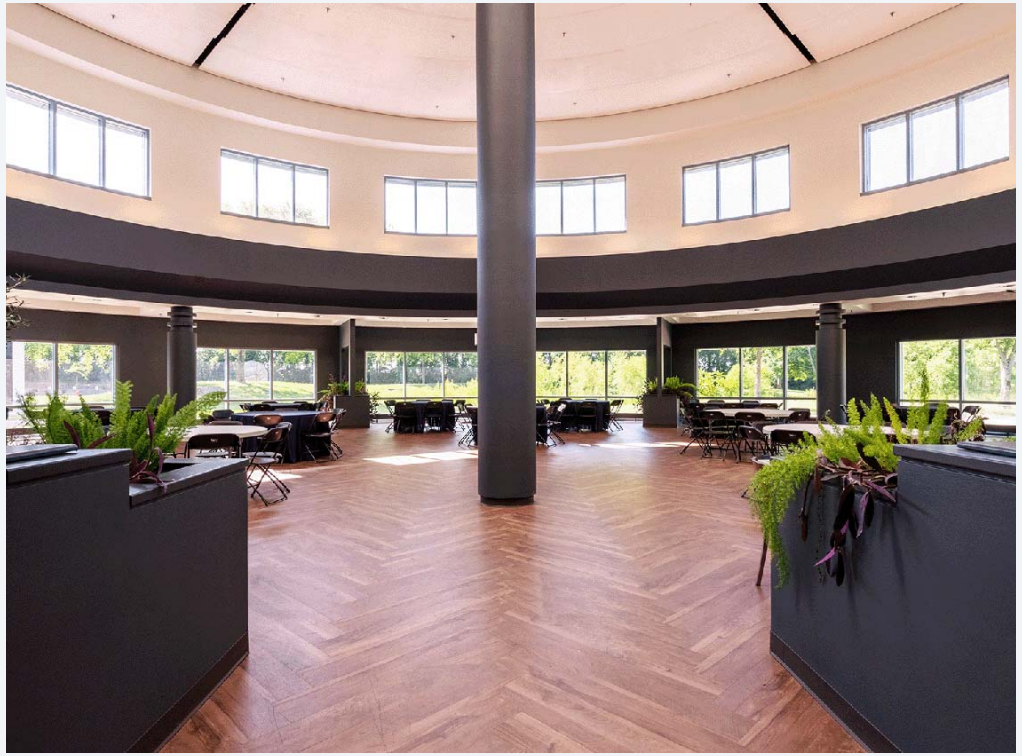

$1.26M

annual base rent

15 tenants

LEASED SPACE

24% occupied

Rental income before operating costs and debt service.

Seller rent roll, 20 Aug 2026; A&M draft appraisal, pp. 2, 7

Strong demand. Constrained supply.

~1%

North American vacancy

95%

Of 66 GW under construction already committed

530+

U.S. local laws restricting data centers

Nashville authorized acquisition of a proposed data center site near the zoo.

The model: lease the powered building. The tenant brings the computers.

JLL, H1 2026; Heatmap, Jul 2026; Nashville Banner, 4 Aug 2026; Applied Digital / TeraWulf SEC filings, 2025

Three possible routes

01

Sell part of the land

Explore a partial land sale, subject to a parcel and power study.

02

Develop a hall

The group develops a facility, sized to verified power and tenant demand.

03

Acquire with a partner

A partner joins the purchase and operates the data center.

The campus continues as a production and events business.

Power determines the scale

10 MW

Seller reported
Utility confirmation pending

Capacity

What can the utility deliver?

Timing

When can it support the first hall?

Cost

What upgrades and rates apply?

Seller capacity claim relayed on the 15 Sep call; no utility confirmation supplied

Shared acquisition. Distinct operating roles.

CAMPUS TEAM

Production and events

Operate the venues.
Grow the tenant and events business.

DATA CENTER PARTNER

Technical delivery and operations

Help fund and deliver the facility.
Operate the data center.

Capital contributions and commercial terms remain open.

What a hall rents for

MARKET RENT, TENANT BRINGS THE COMPUTERS

$1.85M

per megawatt of computer load, per year

5 MW HALL

$9.3M

a year

10 MW HALL

$18.5M

a year

The same rent per gigawatt is about $1.85 billion a year. This campus is measured in megawatts, and the power on site sets the size.

Lease terms and credit support vary. Figures are illustrative, before costs and financing. Site income depends on confirmed power and a signed tenant.

Applied Digital lease to CoreWeave, SEC 8-K, Jun 2025; TeraWulf lease to Fluidstack, SEC 8-K, Aug 2025

What another 10 megawatts would earn

POWER CONNECTION, WORKING FIGURE

$22M

to add 10 MW of utility capacity

THE HALL THAT USES IT

$121M

10 MW liquid-cooled, planning allowance

RENT, ONCE LEASED

$18.5M

a year, tenant brings the computers

The connection alone earns nothing. Power plus hall, about $143M, returns roughly $18.5M a year before financing.

The $22M is a discussion figure with no utility quote behind it. Columbia Power & Water and TVA set the real number, and TVA has not published its terms for new data center load.

Group working figure relayed 15 Sep 2026, utility quote pending; rent from SEC-filed leases; hall cost working estimate

What $22 million of solar and batteries buys

SOLAR, ABOUT $19M

6 to 11 MW

of panels on 18 to 31 acres. Covers 10 to 17 percent of a 10 MW hall's yearly power, by day.

BATTERIES, ABOUT $3M

8 to 14 MWh

About 25 to 80 minutes at full load. Peak shaving and ride-through, not backup power.

TAX TREATMENT

Federal first

30% credit on the battery and a full first-year write-off on both. Solar credit only if running by end of 2027. Tennessee cuts solar property tax and exempts the equipment from sales tax.

Ten megawatts of panels is not ten megawatts of power. Solar trims the bill and the story. The utility connection still sets the size.

Which figure is solar and which is batteries is to be confirmed with Jonas. Whether the data center tax exemption reaches batteries needs a Tennessee tax lawyer.

Figures relayed 15 Sep 2026, to confirm with Jonas; Lazard LCOE+ Jul 2026; NREL PVWatts for this address; Tenn. Code 67-5-601 and 67-6-346; 26 USC 48E

A destination for Spring Hill

Live events and fan zones

A 90-day summer program

Corporate and community use

Immersive experiences, sport and fitness

Planning capacities: 5,000 outdoors / 2,500 indoors. Subject to site and permit review.

Existing venue photography: Worldwide Stages; proposed program, 15 Sep discussion

The events ambition

NEW EVENTS	TENANT INCOME TARGET	COMBINED ANNUAL TARGET
$4M	$1.6M	$5.6M

A planning target, subject to a detailed operating budget.

The event income definition, bookings and delivery costs still need to be established.

Technology as an ethic

Water	**0.27 L/kWh benchmark** Microsoft FY25. Site target to be set.
Power	**33% nuclear in TVA’s grid mix** FY2025 system mix. Grid connected.
Heat	**~200 m to a GM building** Explore heat reuse. No agreement.
Energy	**Battery and power management** Partner and technical scope to be confirmed.

Proposed practice: measure and publish performance each year.

Microsoft efficiency disclosure, FY25; TVA system mix, FY2025; OpenStreetMap distance, 15 Sep 2026; operating-group concept

A long-term commitment to the place

PROPOSED CONSERVATION MODEL

One server.
One acre.

Habitat protection tied to
the computing hosted on site.

Community

Local employment and a community fund.

Accountability

Annual environmental and community reporting.

Continuity

Commitments carried into the operating agreement.

Micki Meng's proposed regenerative model; commitments and partner agreements pending
