SPRING HILL, TENNESSEE

Worldwide Stages

A campus zoned for a data center, below its appraisal, earning today

Investor discussion
September 2026

Buy a working campus. Build two halls beside it.

Saturn built it. Spring Hill kept the lights on after Saturn left. A studio gave it a second life. This is the third.

1 Buy the campus.

56 acres south of Nashville, a film studio with 15 paying tenants.

2 Build the data centers.

Two new halls, 7.5 to 10 megawatts each, on 18 acres already zoned for it.

3 Keep the campus alive.

The studio and the events keep running next door.

4 Give back.

One acre of wild land protected per server. A community fund. Results published every year.

5 Repeat it.

Spring Hill is site one. Its investors see site two first.

"Rebuild a legacy industry with ROI. Investor returns with nature in mind. Recovery for the local community."

Story: Micki Meng, working draft Sept 2026, rewritten plainly; figures: appraisal, rezoning, operating group 15 Sep 2026

Valued at $46.27M. Priced at $32M.

INDEPENDENT VALUATION, ALVAREZ & MARSAL, AUGUST 2026

$46.27M

AGREED PURCHASE PRICE WITH SELLER

$32M

Alvarez & Marsal draft appraisal, 26 Aug 2026 (commissioned by the seller); purchase terms as stated by David DaCosta, 15 Sep 2026

A place with room to grow

Origin: the launch location for Saturn. Today, 2026: a campus for TV and film production, music recording, entertainment events and programming, and corporate hospitality.

56.6

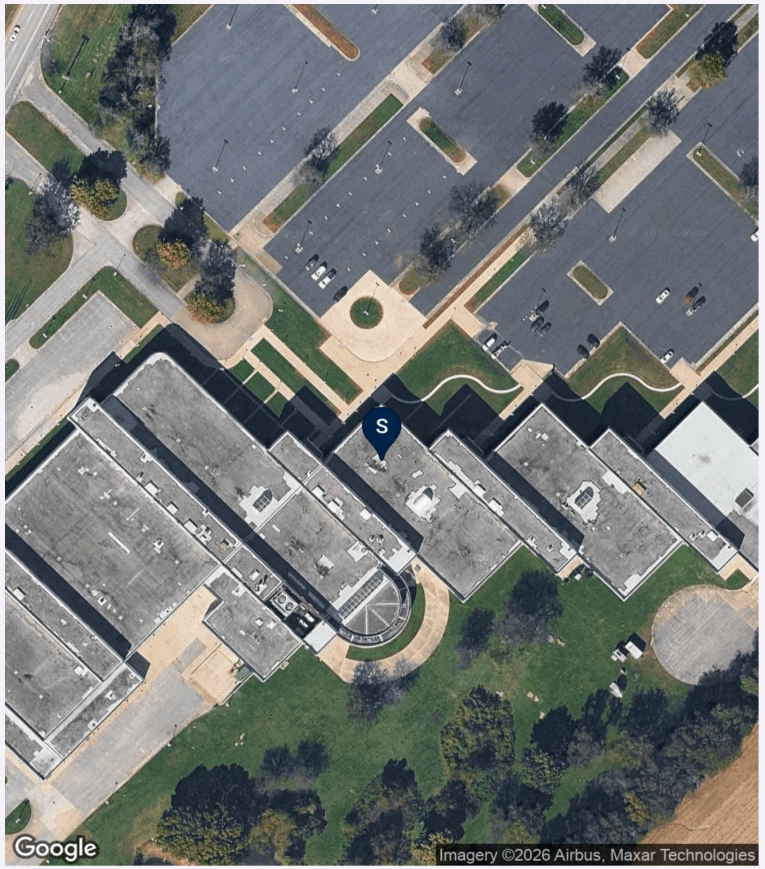

acres across three parcels

355,990

square feet of internal building space

14

acres of outdoor event space*

A&M draft appraisal, 26 Aug 2026, pp. 2, 5, 56. *Outdoor acreage: management estimate, David DaCosta, 15 Sep 2026

$1.26M a year of rent is already in place

Fifteen tenants chose this building before any of us arrived. That is the floor under every other number.

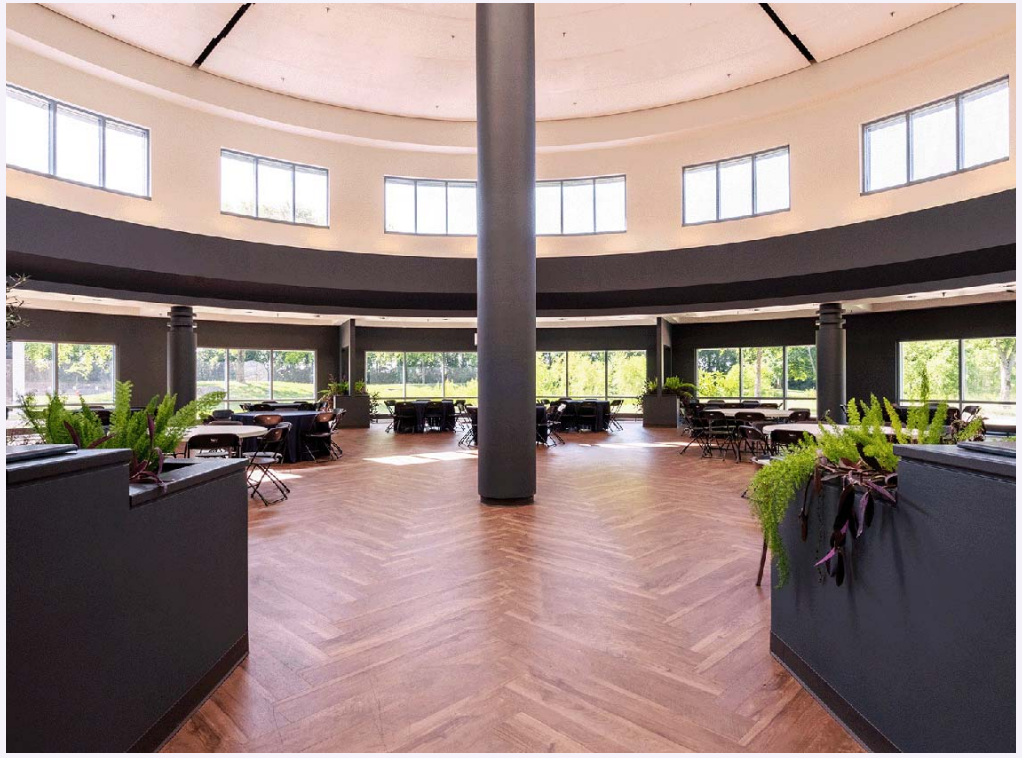

2026 ANNUAL BASE RENT, 15 TENANTS

$1.26M

2027 FORECAST, MANAGEMENT TARGET

$1.6M

24% of the rentable 268,879 sq ft is leased today. 203,733 sq ft is available.

Base rent before operating costs and debt service. Anchor leases run to 2028.

Seller rent roll, 20 Aug 2026; A&M draft appraisal, pp. 2, 7

Three incomes on one site: rent, events, halls

Three ways to get paid from one purchase. One is signed today. The other two are why we are here.

1

Data center

Build two data centers and rent them out.

2

Events and community

Concerts, company events, shows, sports, fitness. Indoors and on about 14 acres outside.

3

Long-term tenants

15 tenants pay $1.26M a year today. $1.6M next year. Three quarters of the space is still open.

One leased megawatt of data center earns more than all 15 tenants pay today.

Framing: David DaCosta, 15 Sep 2026; rent roll 20 Aug 2026; A&M draft appraisal

Everyone wants a data center. Almost nowhere says yes.

~1%

of data center space in North America is empty. The rest is rented.

95%

of what is being built is already rented before it opens.

530+

U.S. local laws restricting data centers

Nashville's city council voted in August to take over a planned data center site near the zoo. 380,000 people had signed a petition against it.

The plan: we lease out the powered building. The tenant brings the computers.

JLL, H1 2026; Heatmap, Jul 2026; Nashville Banner, 4 Aug 2026; Applied Digital / TeraWulf SEC filings, 2025

Zoning, access and room to grow

Most data center sites spend two years asking the town for permission. This one already has permission.

IC zoning

Core parcel: data center use by right

4 new stages

Proposed; final approvals unconfirmed

Private access

Gated road · ~1,000 parking spaces

~30 minutes

To downtown Nashville*

~14 acres

Outdoor activation space*

203,733 sq ft

Vacant rentable space

*Management estimate. Existing campus; expansion approvals remain separate.

Spring Hill zoning letter, 23 Dec 2024; Planning Commission, Jul 2025; A&M draft, Aug 2026; group discussion, 15 Sep 2026

What a hall costs, and what it earns

Build it once. It pays for itself in about six and a half years of rent, then keeps paying for as long as the lease runs.

5 MW

COST TO BUILD
about $60M

RENT PER YEAR
$9.3M

RENT OVER A 10-YEAR LEASE
$93M

10 MW

COST TO BUILD
$121M

RENT PER YEAR
$18.5M

RENT OVER A 10-YEAR LEASE
$185M

20 MW

COST TO BUILD
about $240M

RENT PER YEAR
$37M

RENT OVER A 10-YEAR LEASE
$370M

A 20 megawatt hall earns almost 30 times what the 15 tenants pay today.

Hall about $12.1M per MW, liquid cooled, all in before the utility fee (Turner & Townsend, JLL, Cushman & Wakefield 2025-26; working model 15 Sep 2026). Rent $1.85M per MW a year, SEC-filed leases 2025. 20 MW needs a second 10 MW of utility power, see Adding power.

1 · SELL SOME OF THE LAND

Sell some of the empty land for cash

The empty 18 acres can be sold for cash if we ever need it. Worth far more once the power is confirmed.

WORTH TODAY

$3M to $7M

for the 18.55 acres

WORTH ONCE POWER IS CONFIRMED

up to $19M

for the same acres

What others paid for land like this: Meta about $25,000 an acre in Gallatin before permits. xAI about $800,000 an acre in Memphis, with buildings.

Selling land brings cash now but gives up the rent that land could earn. We would only do it to help pay for the building.

Spring Hill Ordinance 25-21 and site plan; regional land comparables, one-pass research 15 Sep 2026, not yet checked by a second researcher

2 · BUILD IT OURSELVES

Start with 5 MW. Prove it. Then expand.

Start with the hall we can afford. Prove it. Let the second one pay for itself.

USD millions	5 MW air cooled	10 MW liquid cooled
Buy the property	35	35
Build the hall: building, power, cooling, fees	57	121
Power hookup and TVA fee	0 to 8	10 to 18
Reserve and interest while building	8	12
Total	**about 99**	**about 184**
Loans	about 49	about 95
Cash from investors	**about 50**	**about 89**
Rent per year	$9.3M	$18.5M

Payback: rent repays the whole cost in about 11 to 14 years before loans (10 MW about 11, 5 MW about 13). Leases here run 10 to 15 years. First rent 18 to 21 months after we buy, only if the existing power can feed a new hall.

Cost indices: Turner & Townsend, JLL, Cushman & Wakefield 2025-26; working model 15 Sep 2026; loans at 55% of cost, 7.5%; rent $1.85M per MW from SEC-filed leases

3 · BRING IN A PARTNER

The tenant is the financing

We do not have to become a data center company. We have to be the landlord they want.

WITH A BIG COMPANY GUARANTEEING THE RENT

71% to 85%

of the cost, lent by banks at about 6 to 7% (Cipher Mining, 2026)

WITHOUT ONE

50% to 60%

at 7 to 9%, if a bank lends at all. No bank funds a data center without a signed tenant.

Who would rent it: AI cloud companies that lease buildings and bring their own computers (Fluidstack, CoreWeave, Crusoe, Nebius, Lambda). Chip companies renting out capacity (Cerebras pays $1.1B over ten years for 40 MW in Alabama). Regional data center firms.

One 10 MW hall rented out earns about $18.5M a year. The partner brings the tenant and the computers. We own the building and the land.

SEC filings: Cipher Mining 2026 bonds; Applied Digital, TeraWulf, Digi Power X leases; JLL capital markets 2026

Power determines the scale

Everything on these slides waits on one letter from the power company.

10 MW

Seller reported
Utility confirmation pending

Capacity

What can the utility deliver?

Timing

When can it support the first hall?

Cost

What upgrades and rates apply?

Seller capacity claim relayed on the 15 Sep call; no utility confirmation supplied

The connection alone earns nothing. Power plus hall does.

ADDING 10 MW OF UTILITY POWER, DISCUSSION FIGURE

$22M

to add 10 MW of utility capacity

THE HALL THAT USES IT

$121M

10 MW liquid-cooled, planning allowance

RENT, ONCE LEASED

$18.5M

a year, tenant brings the computers

The connection alone earns nothing. Power plus hall, about $143M, returns roughly $18.5M a year before financing.

The $22M is a discussion figure with no utility quote behind it. Columbia Power & Water and TVA set the real number, and TVA has not published its terms for new data center load.

Group working figure relayed 15 Sep 2026, utility quote pending; rent from SEC-filed leases; hall cost working estimate

The grounds are the second venue

Five thousand people on the grounds on a summer night, thirty minutes from downtown Nashville.

Live events and fan zones

A 90-day summer program

Corporate and community use

Immersive experiences, sport and fitness

Planning capacities: 5,000 outdoors / 2,500 indoors. Subject to site and permit review.

Existing venue photography: Worldwide Stages; proposed program, 15 Sep discussion

The events ambition

A target we set, not a promise we make. We say which one it is until it is signed.

NEW EVENTS	TENANT INCOME TARGET	COMBINED ANNUAL TARGET
$4M	$1.6M	$5.6M

A planning target, subject to a detailed operating budget.

The event income definition, bookings and delivery costs still need to be established.

Technology as an ethic

A data center that uses almost no water, warms the plant next door and publishes its numbers is one a town can be proud of.

Water	**0.27 liters per kWh, our target** Microsoft FY25. Site target to be set.
Power	**33% nuclear in TVA’s grid mix** FY2025 system mix. Grid connected.
Heat	**~200 m to a GM building** Explore heat reuse. No agreement.
Energy	**EnergyBoom runs the batteries and the power bill** Jonas Villalba. Exact plan to be agreed.

Proposed practice: measure and publish performance each year.

Microsoft efficiency disclosure, FY25; TVA system mix, FY2025; OpenStreetMap distance, 15 Sep 2026; operating-group concept

The energy plan has an operator

The person running the power plan has spent seventeen years doing exactly this.

Jonas Villalba

Founder and Managing Partner, EnergyBoom LLC / WattChop

17 years
commercial solar and storage

100+
live metering and control gateways

~5 MW
contracted battery delivery, Southern California

Measure what the site uses. Run the solar and batteries to cut the bill. Report the results every year.

Figures reported by the company. Jonas Villalba is the father of Hugo Villalba, who prepared this deck. This campus becomes EnergyBoom's showcase site.

Panels help. The utility connection still sets the size.

SOLAR PANELS, ABOUT $19M

6 to 11 MW

of panels on 18 to 31 acres. Covers 10 to 17 percent of a 10 MW hall's yearly power, by day.

BATTERIES, ABOUT $3M

8 to 14 MWh

About 25 to 80 minutes at full load. Peak shaving and ride-through, not backup power.

TAX TREATMENT

Federal first

30% credit on the battery and a full first-year write-off on both. Solar credit only if running by end of 2027. Tennessee cuts solar property tax and exempts the equipment from sales tax.

Ten megawatts of panels is not ten megawatts of power. Solar trims the bill and the story. The utility connection still sets the size.

Which figure is solar and which is batteries is to be confirmed with Jonas. Whether the data center tax exemption reaches batteries needs a Tennessee tax lawyer.

Figures relayed 15 Sep 2026, to confirm with Jonas; Lazard LCOE+ Jul 2026; NREL PVWatts for this address; Tenn. Code 67-5-601 and 67-6-346; 26 USC 48E

A long-term commitment to the place

Every server hosted here protects an acre of wild land where it is needed most. Investors get to say that out loud.

PROPOSED CONSERVATION MODEL

One server.
One acre.

Habitat protection tied to
the computing hosted on site.

Community

Local employment and a community fund.

Accountability

Annual environmental and community reporting.

Continuity

Goes into the operating agreement at closing.

Micki Meng's proposed regenerative model; commitments and partner agreements pending

Who is accountable for each piece

Two operators, one lawyer, one strategist, and the man who built the campus.

Shawn Papazian

Chair of the Advisory Board

Energy management: EnergyBoom LLC, Jonas Villalba. Technical delivery partners to be confirmed.

September 21, and the 90 days after

Six days from now we stand on the site with an offer letter. Ninety days later we know if it is real.

September 21

Second site visit. We hand the seller our offer letter.

First 30 days

Power company confirms the power in writing. We get the leases. We open talks with three data center operators.

90 days

Final appraisal. Title and the seller's loan. Survey of all 56 acres. Structure and sewer checks.

Each step is paid for on its own and can be stopped on its own.

Money goes in after each check passes, not before.

The first check buys the campus. The second builds.

Amount: to be set by David. Round one buys the property and pays for the checks. Round two comes only after the power is confirmed and a tenant or partner is signed.

Who fits

Patient investors who think in 10 to 20 years and like owning land. People who can bring a tenant, a power contact or building experience. Nashville and Tennessee investors.

Who does not

Anyone who needs to sell in three years, or wants the nature and community promises dropped.

"Technology as an ethic."

Investor fit adapted from Micki Meng's working draft, slide 19; equity amount to be set by David DaCosta
